

## Diamond Cushion Shape

The diamond cushion, shaped, sometimes called the “pillow cut”, combines the romance of rounded corners with the structure of a square or rectangular outline. First developed in the 19th century, it retains a vintage soul while adapting beautifully to modern cutting precision.

Sourced from diamond, rich regions such as South Africa, Botswana, Russia, and Canada, these stones carry the same elemental history as all diamonds, carbon crystals forged deep in the mantle over billions of years, but the cushion cut gives their fire a softer, more diffused quality. It is a shape that blends elegance with approachability, offering both the brilliance of a round and the architecture of a square, making it a perennial favorite among connoisseurs and collectors.

### **The Story Behind Arun’s Fascination for the Diamond : Cushion Shape**

For Arun, the diamond cushion-shaped is the perfect balance between structure and sensuality. Its gentle curves temper the precision of its faceting, allowing the light to move in waves rather than bursts. It feels timeless yet intimate, like a well, worn silk jacket that still turns heads in any room.

When selecting diamond cushion , Arun looks for harmony between outline and brilliance, proportions that let the facets play like ripples over water. He appreciates how the shape can adapt to different moods: an elongated cushion can suggest quiet elegance, while a square cushion radiates presence and poise. Regardless of proportion, he wants the light to roll, not rush, across the surface.

In an Arunashi creation, a diamond cushion, shaped becomes a central voice, never shouting, but speaking in a tone that fills the entire space. To Arun, it is proof that precision and softness are not opposites, but partners in design, capable of creating a light that feels both infinite and deeply human.
