

## Lozenge Cut

The Lozenge Cut diamond is elegance in motion. Elongated, angled, and quietly graphic, its diamond, shaped silhouette feels more like a gesture than a form, directional, fluid, and subtly provocative. Historically associated with heraldry, manuscripts, and decorative arts, the lozenge carries a sense of continuity and refinement. Light travels along its length with intention, emphasizing line, proportion, and rhythm rather than excess.

Diamonds shaped into lozenge cuts are sourced from the world's historic diamond regions, including South Africa, Botswana, Namibia, Russia's Yakutia region, Canada's Northwest Territories, Australia, and the legendary Golconda region of India.

### **The Story Behind Arun's Fascination for the Diamond : Lozenge Cut**

Arun is captivated by shapes that suggest movement rather than arrival.

The lozenge appeals to him because it feels transitional, neither square nor round, neither static nor restless. It's a shape that points somewhere, that implies direction and choice. There's an elegance in that uncertainty, a sophistication that doesn't need to resolve itself.

For Arun, the lozenge cut embodies flow and intention working in tandem. It carries the romance of history, seen in coats of arms and sacred geometry, yet feels unmistakably modern in its clarity and line. It rewards those who appreciate proportion, not spectacle.

In Arunashi, the lozenge diamond becomes a symbol of quiet confidence and forward momentum. Chosen by Arun for its ability to feel both timeless and searching, it speaks to those who understand that beauty doesn't always declare itself head, on. Sometimes, it enters at an angle, sharp, intelligent, and impossibly intriguing.
