

Marquise Cut

The marquise cut diamond is a study in elongated elegance, a form that turns light into a liquid thread. Its origin is tangled in royal intrigue, commissioned, legend says, by France's King Louis XV to resemble the lips of his mistress, the Marchioness de Pompadour. Yet beyond courtly scandal, the shape is pure geometry: two pointed ends meeting in a perfect tension, like the moment before lips touch or sails catch the wind. Diamonds themselves, born deep beneath Earth's crust in places such as South Africa, Botswana, Russia, and Canada, carry an ancient energy, pressures and temperatures so fierce that only time itself could cool them into permanence. In marquise form, that permanence takes on movement. It's a cut that feels less like a shape and more like an intent.

The Story Behind Arun's Fascination for the Diamond : Marquise Cut

For Arun, the marquise diamond is irresistible because it tells a story in two directions at once. It points forward and back, like an arrow that knows both where it's been and where it's going. That duality appeals to him: the past etched in the diamond's geologic memory, the future implied in its aerodynamic grace.

He delights in the cut's French decadence, its sly wink to romance as political currency. But more than history, he's drawn to the shape's defiance, it refuses to sit still. In his designs, the marquise becomes not just a gemstone but a gesture: the curve of a crescent moon over Jaipur, the prow of a Venetian gondola gliding at midnight, the taut silhouette of a sail before the wind takes it.

Arun uses the marquise diamond the way a poet uses enjambment, pushing the line forward, letting the eye and the mind leap. In the world of Arunashi, that leap is everything, because beauty isn't static, it's the moment you cross from what you know into what you can't yet name.
