

Diamond Pear Cut

The diamond pear cut, also known as the teardrop cut, merges the round brilliant's radiance with the marquise's graceful elongation. With one rounded end and one pointed tip, it offers a balance of softness and precision, creating a cut that feels both romantic and dynamic. Originating in the 15th century, the pear shape has endured through centuries of jewelry design, favored for its ability to elongate the hand or neckline.

Sourced from diamond, rich regions such as South Africa, Botswana, Canada, and Russia, it is admired for its brilliance and versatility, whether worn upright for elegance or inverted for drama.

The Story Behind Arun's Fascination for the Diamond : Pear Cut

For Arun, the diamond pear cut is a study in contrasts, a single gemstone that holds both tenderness and intent. The rounded end feels like a drop of light suspended in stillness, while the pointed tip carries that light forward in motion. To him, it is the embodiment of a journey, beginning, middle, and destination all contained in one shape.

When selecting diamond pear cuts, Arun seeks perfect symmetry, with brilliance flowing seamlessly from the rounded curve to the sharp tip. He is attentive to the cut's proportions, ensuring no "bow-tie" shadows interrupt the stone's internal conversation with light.

In an Arunashi creation, the diamond pear cut becomes a gesture, sometimes a droplet, sometimes a flame, always a form that invites the eye to travel. To Arun, it is proof that elegance can be both directional and delicate, and that the most compelling shapes are those that know how to move.
