

Princess Cut

The diamond princess cut is a contemporary classic, sharp, square, and alive with brilliance. First developed in the late 20th century, it quickly became one of the most popular fancy shapes, offering the clean, modern lines of a square or rectangle with the scintillation of a round brilliant.

Sourced from diamond, rich regions such as South Africa, Botswana, Canada, and Russia, princess cuts are engineered for maximum light return through a precise arrangement of facets that create a lively, almost crystalline sparkle. Its crisp edges and flat profile give it an architectural presence, while its brilliance keeps it vibrant and full of movement.

The Story Behind Arun's Fascination for the Diamond : Princess Cut

For Arun, the princess cut is the diamond at its most disciplined yet exuberant. Its geometry feels intentional, no wasted space, no softened corners, yet the way it catches light is anything but restrained. He loves the duality: the order of the square framing a chaos of brilliance within.

When selecting princess diamonds, Arun looks for perfect symmetry and facet alignment that keeps light dancing evenly across the surface. The edges must be clean, the proportions balanced, so the stone holds both structural integrity and visual energy.

In an Arunashi creation, the diamond princess cut becomes a focal point of clarity and intent, a gemstone that wears its precision like a crown. To Arun, it is proof that modernity can be every bit as romantic as tradition, when geometry and light are brought into perfect conversation.
