

Reverse Set

A reverse set diamond turns expectation on its head, quite literally. Instead of presenting its table outward, the diamond is set inverted, allowing its pavilion to face the world. The result is depth without display, intensity without excess. Light moves differently here: inward, architectural, almost secretive. What is usually hidden becomes the point of focus, revealing the diamond's inner geometry with quiet confidence.

Diamonds used for reverse settings originate from the same storied regions as their traditional counterparts, South Africa, Botswana, Namibia, Russia's Yakutia region, Canada's Northwest Territories, Australia, and the historic Golconda region of India, each geography contributing its own geological temperament.

The Story Behind Arun's Fascination for the Diamond : Reverse Set

Arun loves a diamond that knows how to break the rules politely.

The reverse set diamond fascinates him because it challenges the hierarchy of what is meant to be seen and what is meant to be known. By turning the diamond inward, out, the setting becomes an act of intellectual mischief, an invitation to look closer, to question assumptions, to reconsider where beauty truly lives.

For Arun, this approach feels philosophical. Why should the most familiar face of a diamond always be the one on display? Why not honor its structure, its depth, its inner architecture, the part shaped by pressure, patience, and time?

In Arunashi, the reverse set diamond becomes a quiet rebellion. It speaks to those who appreciate nuance, who understand that intimacy can be more powerful than announcement. Chosen by Arun for its restraint and audacity in equal measure, it reflects his belief that the most compelling beauty is often discovered when you dare to look at things from the other side.
